

What is generation and how is it priced?

Generation is the first step of bringing electricity to your home or business. Whether from older sources like coal or renewables such as solar and wind, generated electricity is then distributed through power lines.

How are rates set?

- Generation rates are set on the auction date.
- Rates are set by market conditions and not AES Ohio.

When will I see adjusted supply charges?

- New generation rates will go into effect June 1, 2023, for one year.

An independent third party with oversight by the Public Utility Commission of Ohio (PUCO) conducts the auction.

AES Ohio releases 2022 Community Impact Report

The 2022 AES Ohio Community Impact Report shines a light on the investments we made during one of our Miami Valley's toughest times and demonstrates how we are powering a positive and sustaining impact for the future. Our grants, which reached more than \$2.4M in 2022, was invested back into the community through four strategic areas:

- Economic Development and the Arts
- Poverty Reduction
- Workforce Development
- Diversity, Equity and Inclusion

AES Ohio is committed to investing in the communities where we live and work. Each year, we strive to serve better, learn more and lead well. We are honored to serve the people and communities we call home.

Thank you to our volunteers and families who generously donate their time and talent to numerous local organizations, serving on boards and support our giving campaigns. #PoweringCommunity is what we do and who we are.

To learn more about how AES Ohio is making a difference in our communities, please take a few minutes to read our stories and watch the accompanying video at aes-ohio.com/community.

Customers who have AES Ohio as their supplier

AES Ohio passes on the auction market prices to the Standard Service Offer (SSO) customers. SSO customers will see their generation rates decrease by \$1.03 for a typical residential customer using 1,000 kWh per month. AES Ohio has the lowest distribution and transmission rates in Ohio among the investor-owned utilities.

To calculate your rate, use our residential and business bill calculation spreadsheets along with your bill to better understand the AES Ohio charges.

The market-based auction for generation is separate from AES Ohio's investment and rates for transmission and distribution cases that are subject to PUCO approval.

In Ohio, customers can buy their electric generation from any PUCO-certified supplier. The Energy Choice Ohio "Apples to Apples" website energychoice.ohio.gov/ApplesToApples can help you compare the different offers available to you.

AES Ohio sponsors Summer in the City events

AES Ohio is the proud sponsor of Summer in the City - a program of the Downtown Dayton Partnership. Summertime is the perfect time to get outside and spend time with friends and family exploring all your city has to offer.

In May, the downtown Housing Tour returned after three years. It was an open-house event that gave prospective residents the opportunity to view homes and experience the benefits of downtown living. On August 5 we also sponsor Art in the City, where artists and aspiring artists showcase their work.

Smart meter installation project continues

In December 2021, AES Ohio began a four-year program to install 495,000 smart meters to our customers. As of May 31, 197,814 meters have been installed. The smart meters will enable customers to monitor and manage their energy usage more effectively. This not only improves data security, but also enhances customer support and reduces the impact of storms.

Some of the benefits you'll see in the coming years:

- Notifies us if you have an outage.
- Helps us restore power more efficiently.
- Provides you and us with an ongoing usage data, which can help you save.
- Promotes a more efficient grid.
- Allows us to remotely start and stop your service when you move.
